INTERVIEW TRANSCRIPT

AI Hello! I'm RecruitX AI Interviewer, your AI interviewer today. To get started, could you please introduce yourself and tell me a bit about your background?

DHRUV SHERE And currently, I'm working with Famous Project company as a software developer.

AI Oh nice! What kind of projects have you worked on there?

DHRUV SHERE So, basically, I'm working here

AI Got it, so could you share what technologies or frameworks you've been using in your current role?

DHRUV SHERE on projects like the data data.

AI It sounds like you're referring to some data-related projects. Can you clarify what specific technologies or tools you've used in those projects?

DHRUV SHERE So, basically, I'm, like, just as a right product. So I use technologies depending on the project.

AI Okay, I see. Can you give an example of a specific project you've worked on, including the technologies you used and your role in that project?

DHRUV SHERE So, basically, I will open the new project.

AI I understand you're starting a new project. Can you tell me what technology stack you plan to use for that project?

DHRUV SHERE For which was built in React and RGS.

AI Got it! You're using React, which is great. Can you explain what RGS is and how you plan to integrate it into your project?

DHRUV SHERE So, basically, it was working for QA department.

AI Okay, it seems you're focusing on quality assurance. Can you share how you handle testing in your projects, especially with React?

DHRUV SHERE Yeah. So, basically, it was, like, for the QA department and the developer department.

AI I see you're involved with both QA and development. Can you describe a specific challenge you faced while working on these projects and how you resolved it?

DHRUV SHERE Yeah. Sure. Because, basically, I was working

AI I appreciate that! Can you share a specific example of a challenge you encountered and what steps you took to address it?

DHRUV SHERE in that project running on purpose learning the needs of the

AI It sounds like you were focused on understanding user needs. Can you elaborate on the specific challenge you faced during that process and how you tackled it?

DHRUV SHERE Right? They find a box and then

AI I'm not quite sure I understand what you mean. Could you clarify what you mean by "they find a box" and how it relates to the challenge you faced in your project?

DHRUV SHERE Basically, was a no. Today, we're

AI I'm having a bit of trouble following you. Could you please explain a bit more about what happened today and how it relates to your experience or the project you were discussing?

DHRUV SHERE kind of challenge which are patient because I know the requirements.

AI I see! It sounds like understanding requirements was a challenge for you. Can you share how you go about gathering and clarifying those requirements when starting a project?

DHRUV SHERE Why you are having trouble to follow me?

AI I apologize if I misunderstood your responses. I'm trying to get a clearer picture of your experiences. Can you help me by explaining how you gather and clarify project requirements?

DHRUV SHERE So, basically, first, we understand the domain of the project. Like, which kind of thing the client want. And then we other requirements, like basic requirements for start work. Then they leave down then for the future, improvement. Yeah.

AI Got it! It sounds like you start by understanding the project domain and the client's needs before outlining the basic requirements. How do you prioritize those requirements for development?

DHRUV SHERE So, basically, first of all, I listen carefully.

AI That's a great approach! Active listening is key. Once you've listened and gathered the requirements, what steps do you take to ensure the team understands and aligns with those priorities?

DHRUV SHERE Then the big down part for the particular comments, like, for this will be the basic, and this will be the most high advertised environment. So

AI It sounds like you categorize the requirements based on their importance. Can you explain how you determine which requirements are classified as high priority?

DHRUV SHERE yeah. So what will he want?

AI I see, so you focus on the client's main goals. How do you ensure those high-priority requirements are met during the development process?

DHRUV SHERE The in depends on requirements, discussions, what can

AI Got it! It sounds like ongoing discussions play a key role. Can you explain how you manage those discussions throughout the development cycle to keep everything on track?

DHRUV SHERE So, basically, I understand. We are having a meeting in every team should use.

AI That makes sense! Regular team meetings help ensure everyone is on the same page. How do you handle any disagreements or differing opinions that may come up during those meetings?

DHRUV SHERE Which which makes us as client

AI I see, so you aim to keep the client's needs in focus. Can you describe a specific situation where a disagreement arose, and how you resolved it while keeping the client in mind?

DHRUV SHERE we are with the project.

AI I appreciate the input! Can you share more about a specific instance in a project where you encountered a disagreement and how you addressed it?

DHRUV SHERE So there is a note, like, example in which I'm for data scenario because that kind of thing doesn't happen with me.

AI Okay, it sounds like you haven't faced a disagreement in your projects. In that case, how do you usually approach team collaboration to prevent misunderstandings or conflicts from arising?

DHRUV SHERE So in a group project, we are having a full meeting.

AI Got it! Regular full team meetings help facilitate communication. How do you ensure that everyone contributes and feels heard during those meetings?

DHRUV SHERE With a client. Like, everyone suggested there was point of view.

AI Sounds like you encourage input from everyone, including the client. How do you incorporate that feedback into your development process?

DHRUV SHERE And then we discuss about that. One has a this suggestion, probably, try to solve it.

AI I see! So you discuss the suggestions as a team to find solutions. Can you give me an example of a suggestion that led to a significant improvement in a project?

DHRUV SHERE Like, currently, I can't recall it. Like, because there are multiple projects which I'm working. So that specific task or specific scenario, I can't recall.

AI That's understandable, juggling multiple projects can make it hard to remember specific details. Can you tell me about a recent project you worked on and one of your main responsibilities in that project?

DHRUV SHERE Yeah. I'm with a strict example of from very quick work, which is a project and which was five frame, you know, it took. And then I put a particular project and to complete it.

AI I appreciate that! It sounds like you were involved in a project with a strict timeline. Could you share what specific role you played in completing that project?

DHRUV SHERE Yeah. So that was the project.

AI I see you're referring to the project, but I'm looking for more details about your specific role or contributions. Can you describe what tasks you were responsible for in that project?

DHRUV SHERE In that, my role is building a content as well as a back end and well as a I'm looking on features and functionalities. To implement a new kind of things in that.

AI That sounds engaging! So you were involved in both frontend and backend development, along with implementing new features. Which technologies did you use for the frontend and backend in that project?

DHRUV SHERE Basically, I use your next sales for both things.

AI Got it, so you used Next.js for both frontend and backend work. Can you share a specific feature you implemented using Next.js that you're particularly proud of?

DHRUV SHERE We send it to state that is in color for and to check which is the

AI It sounds like you implemented a feature involving state management and color checking, but I'm not quite clear on the details. Could you elaborate on what that feature does and how it benefits the project?

DHRUV SHERE when a recruiter approves a candidate, that I mean, then he approves a normal resume of a candidate. That that finger is

AI Thanks for sharing! So it sounds like you built a feature related to candidate approval. Can you explain how this feature works within the application and what technologies were involved in its implementation?

DHRUV SHERE Yeah. Sure. Basically, there are pictures like when you recruited, upload the candidate in our system.

AI I see! So there's an upload feature for candidate profiles. What happens after a recruiter uploads a candidate's information? How does the approval process work within the system?

DHRUV SHERE That degree to go to their job. And that resume convert the the regular business. That was the

AI I appreciate that! It seems you have a process where resumes are converted for business use. Can you clarify how the resume conversion works and what technologies support that process?

DHRUV SHERE basically, we are using generic name for converting that team, and the right one we will call it for right level listen.

AI Got it! So you use a naming convention for the conversion process. Could you explain what you mean by "right level listen"? How does that relate to the overall functionality of the feature?

DHRUV SHERE Can you repeat that question?

AI Sure! I was wondering what you mean by "right level listen" and how it relates to the functionality of the resume conversion feature. Could you explain that a bit more?

DHRUV SHERE Like, I didn't say anything about right level listen.

AI Ah, I see! My mistake there. Can you clarify how the conversion of resumes works in your project and what technologies you use for that process?

DHRUV SHERE For that team, we are using generally, a drop to DLP to convert the little resume in a right label resume.

AI Thanks for clarifying! It sounds like you're using a tool for document conversion. How does the DLP (Data Loss Prevention) tool help in the resume conversion process, and what advantages does it provide?

DHRUV SHERE So, basically, DLP wasn't the included in that, but data loss for interventions, so kind of thing. We have to show

AI Got it! So DLP was mentioned in the context of data loss prevention but isn't directly part of the conversion process. Can you explain how you ensure that candidate data remains secure during the upload and conversion process?

DHRUV SHERE we can authenticate it, email address contact details, all of that things.

AI I see, so you authenticate using email addresses and contact details to ensure security. Can you describe the authentication method you use? Is it something like JWT tokens or sessions?

EVALUATION SCORECARD

2/10

NO HIRE

Dhruv Shere demonstrated active listening and involvement in diverse roles but struggled to provide clear and detailed responses about his technical experience and project involvement.

Technical Knowledge

2/10

Limited clarity on technologies and frameworks used.

Communication Skills

3/10

Demonstrated active listening but lacked coherence and clarity in responses.

Problem Solving

2/10

Unable to articulate specific challenges or solutions effectively.

Project Experience

2/10

Struggled to provide detailed examples of past projects and roles.

Understanding of Requirements

3/10

Showed some understanding of gathering requirements but lacked depth in explanation.

- ✓ Active listening · Involvement in diverse roles
- ✗ Lack of response · Lack of clarity and coherence · Lack of detail in answers

Next Steps: Consider providing feedback to the candidate on improving communication skills and ability to articulate technical experiences.
